

Shader Lab Assignment 8: Water Shader

This week I wanted to make a water shader that could belong in a stylized fantasy world, so I created this pixelated water with bloom effects. I also added a faded pixel effect on the land...it's a bit hard to make out in the gif but I wanted something light so the land pixels wouldn't muddy the water colors. The pixels were created by rounding the uvs, and the bloom with a ternary based on the final color of the water. I spent about an hour playing around with adding a grain effect and changing the land, but ended up stripping it back down to this simpler version because I liked the look the most.
