

Shader Lab Assignment 9: Surreal

For the surreal early CGI assignment I started with the idea to create houses getting swept away by a tornado into outer space, but ended up somewhere completely different...I'm calling it "eco brutalism". My main goal was just to get a variety of textures for the houses, "nodes", lamps and planes that would play off of each other in an interesting way. I used a combination of primitives and meshes I modeled in Blender. For the textures, I found a free skybox and repurposed some of rock and water textures from class. I was able to create some interesting effects by breaking meshes and combining IBL and shader logic from last week.
